

# Recycling at Home.

Did you know?

Most families are quite good at recycling but anything that they put in their rubbish bin is burnt to make energy.

In Sweden they are so good at recycling they don't have enough rubbish to burn to make energy so take rubbish from other countries including Norway.

## Challenge.

There are many things that when we have finished with them, we can recycle.

Use the house on the next page and draw different objects that can be recycled in each room.

Then colour in the wheelie bin to match the colour of your recycling bin at home.
