

Newspaper

Lots of people read
the newspaper
every day.

Newspaper

You place the newspaper in the paper recycling bin.

Newspaper

The special lorry takes away all the paper to be recycled.

Newspaper

The paper gets sorted ready for recycling.

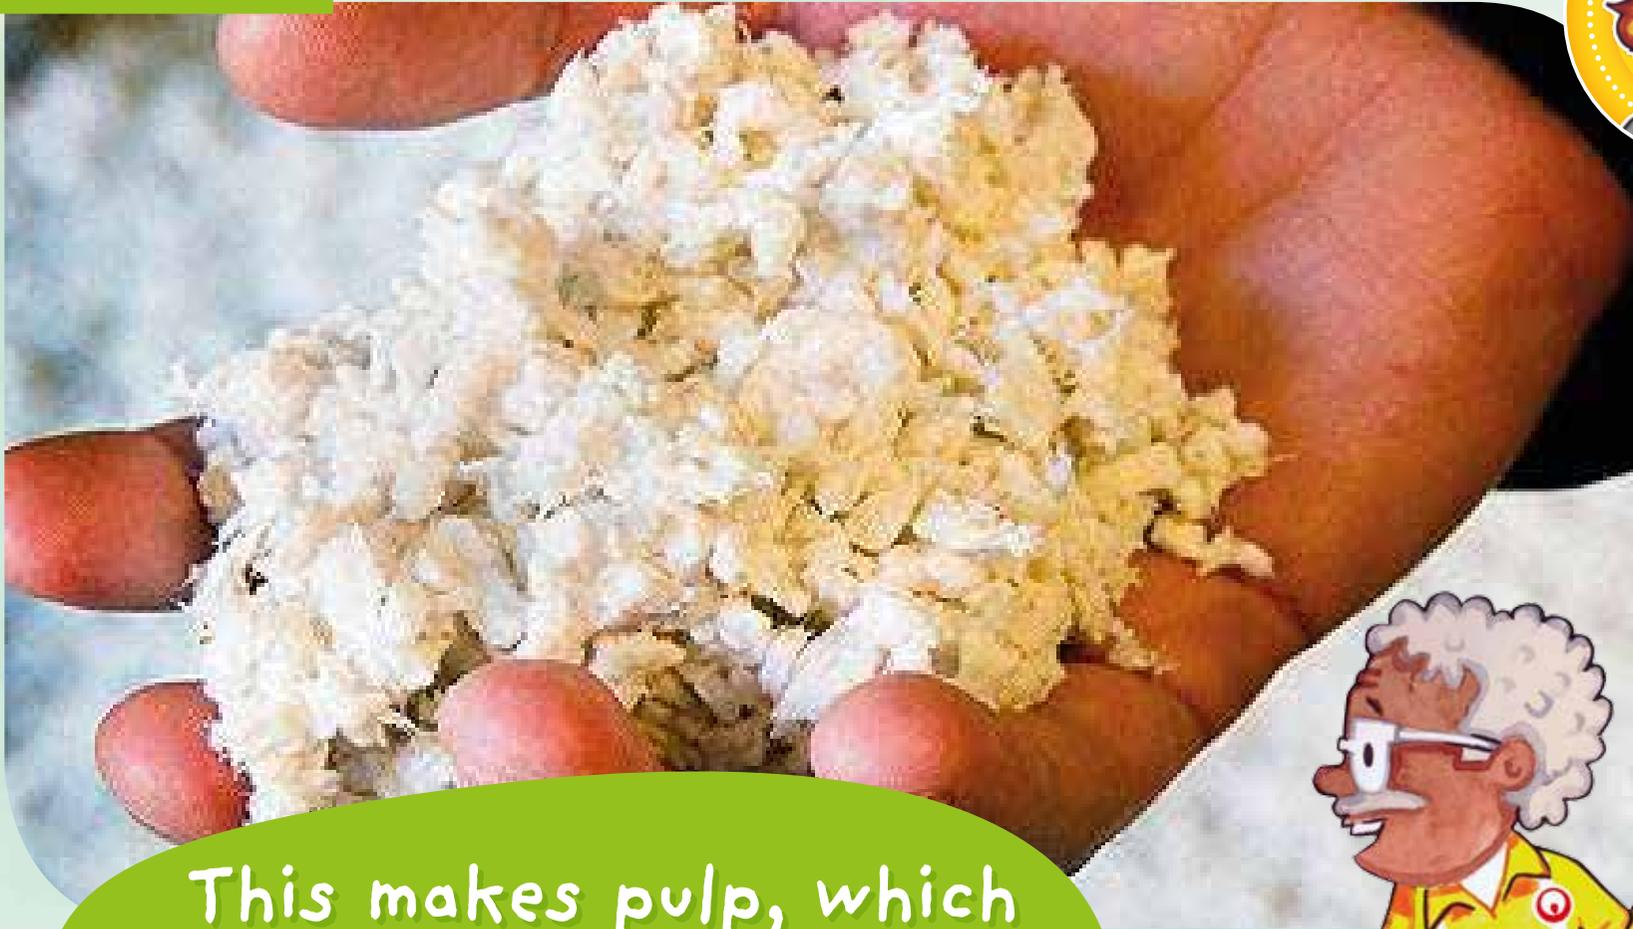

Newspaper

The paper is then added to huge pots of water and special chemicals.

Newspaper

This makes pulp, which is very soggy paper! The chemicals get rid of all the ink from the paper.

Newspaper

The paper is now ready to send through a big machine which squashes and flattens the pulp into giant sheets.

Newspaper

It can then be used to make new sheets of paper or even toilet paper!
