

# Unmeasured Bill Explanation

## Bill period

Shows the period covered by your bill. Our charge period runs from 1st April to 31st March. If you move into your property after April, your charges will be calculated from your moving date up to March.

## Number of days

This relates to the period of the bill which is shown at the top of your bill.

## Rateable value

Each property built before April 1989 has its own individual chargeable value and once set can not be changed. The rateable value was set by the valuation office at the Inland Revenue. It represented a potential annual rent for your property at that time. Water companies, including Veolia Water Projects, use this value to calculate your water charge. The rateable value is not the same as, or linked to your council tax banding.

## Quantity

This is calculated by dividing the number of days (as above) by the number of days in the year then by multiplying with the rateable value (as described on the left).

## Unit price

The unit price is the rate that we charge.

In the example:

Water Consumption Charge unit price: 1.8952

Water Standing Charge unit price 7.00

## Standing charge

A fixed annual charge is applicable for both the water supply and removal and treatment of wastewater. The number of days covered by your bill determines the proportion of the standing charge payable.
