

# Water Design Build

## Rethinking water resources

### Who is this ideally suited to?

Whether you're an industrial site, municipality or any other mid-to-large water customer, you will be looking for ways to keep your bills down and find productive uses for your wastewater.

**KPI BENCH  
MARKING**

**WASTEWATER  
INNOVATION**

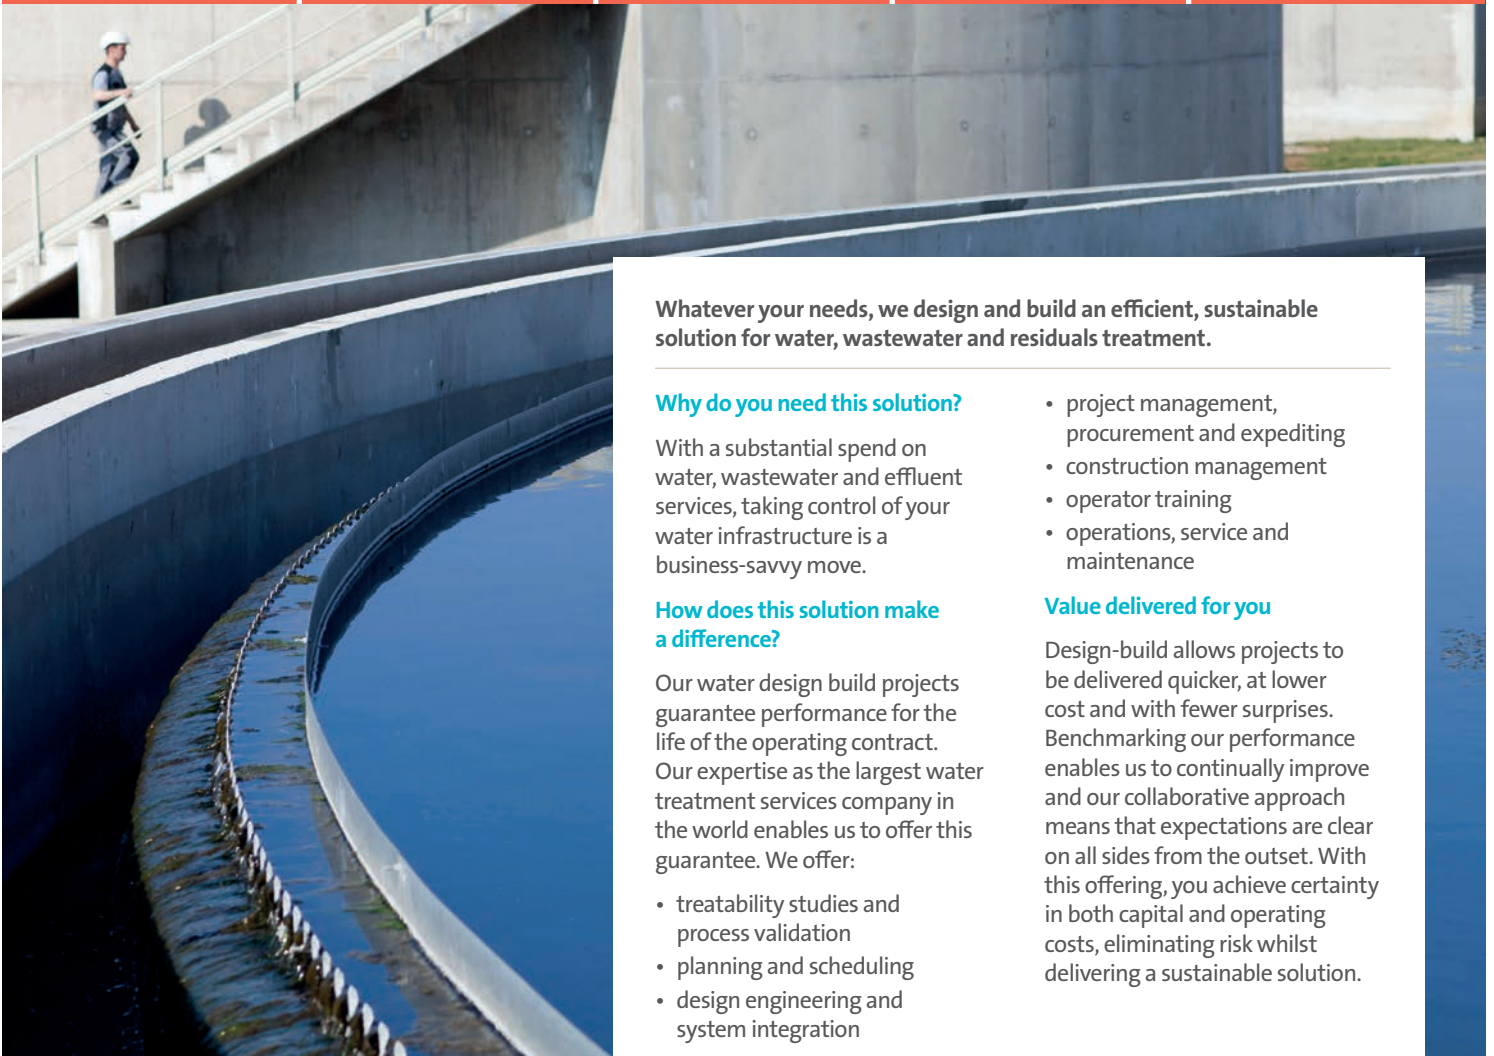

**SAVE WATER  
AND MONEY**

**STRATEGIC  
MANAGEMENT**

**BRAND AND  
CSR BENEFITS**

Whatever your needs, we design and build an efficient, sustainable solution for water, wastewater and residuals treatment.

### Why do you need this solution?

With a substantial spend on water, wastewater and effluent services, taking control of your water infrastructure is a business-savvy move.

### How does this solution make a difference?

Our water design build projects guarantee performance for the life of the operating contract. Our expertise as the largest water treatment services company in the world enables us to offer this guarantee. We offer:

- treatability studies and process validation
- planning and scheduling
- design engineering and system integration

- project management, procurement and expediting
- construction management
- operator training
- operations, service and maintenance

### Value delivered for you

Design-build allows projects to be delivered quicker, at lower cost and with fewer surprises. Benchmarking our performance enables us to continually improve and our collaborative approach means that expectations are clear on all sides from the outset. With this offering, you achieve certainty in both capital and operating costs, eliminating risk whilst delivering a sustainable solution.
